Dedication

I dedicate this book to my daughter Carla Maria Calixto and my son Leonardo Calixto

Thanks

Thanks for my wife Isabel Katrin Calixto and my sons Leonardo Calixto and Karla Maria Calixto to make my life very special and inspired me to keep going writing.

“You can do fantastic things, but people will only value what you do when it bring some direct or indirect beneficial to them, then they you say that what are you doing is fantastic.”

Jagadish Vasudev, The Sadguru, India 2018

Contents

1.0	CHAPTER A.I: MACHINE LEARNING APPLIED FOR MAINTENANCE 4.0	8
	1.1 Artificial Intelligence Introduction	9
2.0	CHAPTER: MAINTENANCE CONCEPTS	13
	2.1 Introduction	14
	2.2 Non-Destructive Test Concepts	15
	2.3 Criticality Analysis	23
	2.4 Maintenance Management	26
3.0	CHAPTER: PROGNOSTIC HEALTH MANAGEMENT	29
	3.1 Prognostic Health Management Introduction	30
	3.2 - Prognostic Health Management Methodology	32
	3.2.1 - Equipment Selection for PHM program	32
	3.2.2 - Failure Signature	34
	3.2.3 - Noisy Data	35
	3.3 – From ata Processing to RUL and SoH prediction	36
	3.3.1 - Fault to Failure progression (FFP) and Degradation Progression Signature (DPS)	36
	3.3.2 RUL, SOH and EOL estimation	39
	3.4 Prognostic Health Management Case	42
4.0	CHAPTER: MACHINE LEARNING CONCEPTS	48
	4.1 Machine learning concept	49
	4.2 Unsupervised Machine Learning	51
	4.3 Supervised Machine learning	53
	4.4 Supervised Machine Learning Regression (SMLR)	55
5.0	CHAPTER: UNSUPERVISED MACHINE LEARNING	57
	5.1 Unsupervised Machine Learning Introduction	58
	5.2 Principal Component Analysis (PCA)	59
	5.3 Multidimensional Scale (MDS)	69
	5.4 K-Means	73
	5.5 Gaussian Mixture	78
	5.6 Hierarchical Cluster	83
	5.7 Neural network Self -Organized Map	89
6.0	CHAPTER: SUPERVISED MACHINE LEARNING CLASSIFICATION	98

6.1	Supervised Machine Learning Introduction	99
6.2	K-Nearest Neighbor (KNN)	100
6.3	Decision Tree	110
6.4	Naive Bayes	118
6.5	Linear Discriminant Analysis	128
6.6	Support Vector Machine	137
6.7	Neural Network (Classification)	146
6.7.1	Feed Forward neural network	149
6.7.2	Backpropagation NN Process	152
7.0	CHAPTER: SUPERVISED MACHINE LEARNING REGRESSION	158
7.1	Supervised Machine Learning Regression (SMLR) Introduction	159
7.2	Linear regression	160
7.2.1	Ridge Regression.....	163
7.2.2	Linear regression Case Study	166
7.3	Stepwise Linear Regression	174
7.4	Gaussian Process Regression	181
7.5	Tree Regression	189
7.6	Support Vector Machine	196
7.7	Neural Network (Regression)	202
8.0	CHAPTER: ENSEMBLE METHODS	210
8.1	Ensemble Methods Introduction	211
8.2	Ensemble Case Study	214
9.0	CHAPTER: CONVOLUTIONAL NEURAL NETWORK	224
9.1	Convolutional Neural Network Introduction	225
9.2	Convolutional Neural Network Case Study	231
10.0	CHAPTER : ASSET MANAGEMENT 4.0	237
10.1	Asset Management Concepts	237
10.2	Asset Management 4.0 – Asset Management Intelligence	244

	APPENDIX C - ABBREVIATIONS AND ACRONYMS	263

Preface

The motivation for this book is to give my homely contribution to the application of Artificial Intelligence concept to the maintenance engineering. In the last 10 years, with the advent of Industry 4.0, new computational algorithms supported by mathematics methods has been implemented in all industry and more intensively in the process industry. Together with such new technology to capture data by using sensor, combined with Artificial Intelligence methods the new concept of Maintenance 4.0 came out. Therefore, this book is structured as following:

The first chapter introduce the concept of Artificial intelligence and it's application on the maintenance domain.

The second chapter introduce the maintenance concepts by explained the different types of maintenance as well as equipment criticality classification and state of ar of maintenance management system.

The third Chapter introduce the Prognostic Health management concept and how to predict the Remaining Useful Life and State of Health based on sensor data or data from Non-Destructive test.

The fourth Chapter introduce the concept of Different types of Machine learning methods such as Unsupervised Machine Learning and Supervised Machine Learning. The Fifth Chapter introduce the concept of Artificial Intelligence Unsupervised Machine Learning (UML) that aims to group data based on it features by demonstrating examples of maintenance planning and equipment clustering. By doing so, different UML methods such as Principal Component Analysis (PCA), Multidimensional Scaling (MDS), K-Means, Gaussian Mixture, Hierarchical Cluster, and Neural Network Self Organized Map are presented.

The sixth chapter present the Artificial intelligence Supervised Machine Learning Classification that aims to classify the equipment based on different class of risk or criticality as well as to defined high level of equipment degradation for alarm set up. Therefore, different method with several examples applied to maintenance such as K-Nearest Neighbour (K-NN), Decision Tree, Naïve Bayes, Discriminant Analysis, Support Vector Machine (SVM) and Neural Network Classification are presented.

The seventh chapter present the Artificial Intelligence Supervised Machine Learning Regression methods that aims to predict a dependent variable such as RUL or SoH based on the past dependent and independent variable values. Therefore, different methods with several example of RUL regression prediction take place such as Linear Regression, Support Vector Machine, Decision Tree, Ridge and Lasso methods, Stepwise and Neural network.

The eight chapter present the concept of Ensemble methods that aims to reduce the classification or regression prediction error by creating new subset samples from the main database. The different Ensemble methods such as Random tree

The nineth chapter aims to present the concept of Deep Neural Network and Convolutional Neural Network by given an example of image classification applied to RUL prediction.

The tenth chapter aims to present the concept of Asset Management Intelligence 4.0 that aims to encompasses the concepts defined in the ISO55001 and the PHM and Artificial Intelligence concepts presented in the previous chapter. Therefore, AMI in a system that integrate the data and display intelligent information and prediction that enable maintenance leaders and expert out their effort in data assessment and fast decision rather than data collection, preparation, and predictions.
