Artificial Intelligence for Maintenance 4.0

Online Training

SECURE YOUR PARTICIPATION!

Website: <http://www.eduardocalixto.com>

Email: ec@eduardocalixto.com

Why Should attend this training ?

- To understand the current status of Maintenance Engineering concepts, knowledge, methodologies and Management based on CMMS.
- To understand the concept of Prognostic Health Management that aims to predict the Remaining Useful Life (RUL) and State of Health (SoH) of equipment that operates over their design stress limits.
- To understand the Unsupervised Machine Learning Methods (USML) such as Principal Component Analysis, Multidimensional Scaling Analysis, K-Means, Gaussian Mixture, Hierarchical Cluster, Neural Network Self-Organized Map and their application to cluster equipment data and optimize maintenance schedules.
- To understand the Supervised Machine Learning Classification (SMC) methods such as K-Nearest Neighbor, Decision Tree, Naive Bayes, Neural Network Classification, Linear Discriminant Analysis, Support Vector Machine and Logistic Regression Classification. In addition, the application of such methods to classify risk, criticality and rank different level of equipment degradation to set up alarms alert of RUL.
- To understand the Supervised Machine Learning Regression methods such as Linear Regression, Ridge and Lasso Regression, Stepwise Regression, Decision Tree Regression, Support Vector Machine Regression, Gaussian Regression and Neural Network Regression. In addition, several examples of RUL prediction will be demonstrated.
- To understand the concept of Ensemble methods such as Boosting, Bagging, Stack and Random Forest with a case study example application.
- To understand the concept of Convolutional Neural Network with an example of image classification applied to high vibration degradation images.
- To understand the concept of Asset Management Intelligence based on the Asset Management 4.0 solution .

Who Should attend this training ?

Production Managers, Asset Management Managers, Asset Integrity Managers, Maintenance Managers, Reliability Managers, Reliability Engineers, , Maintenance Engineers, Process Engineers, Safety Engineers, Production Engineers.

Trainer : Dr Eduardo Calixto, CRP, CFSE.,

He's Reliability and Safety Engineer Expert with over 18 years experiences in Oil & Gas, Railway, Aerospace and Mining Industries. He has Doctoral Degree in Energy and Environmental, Master in safety System Management, Bachelor in Industrial Engineering. Author of the best seller Book Gas and Oil Reliability Engineering: Modeling and Analysis (material content of this training).

Artificial Intelligence for Maintenance 4.0

Online Training

SECURE YOUR PARTICIPATION!

Website: <http://www.eduardocalixto.com>

Email: ec@eduardocalixto.com

Day 1 - Training Outline:

- Module 1: Introduction
- Module 2: Maintenance Concepts
- Module 3: Prognostic Health Management
- Module 4: Artificial Intelligence Introduction
- Module 5: USML - Principal Component Analysis
- Module 6: USML - Multidimensional Scaling
- Module 7: USML - K-Means
- Module 8: USML - Gaussian Mixture
- Module 9: USML - Hierarchical Cluster
- Module 10: USML - NN Self-Organized Map
- Module 11: SMLC - Neural Network Classification
- Module 12: SMLC - K-Nearest Neighbor
- Module 13: SMLC - Decision Tree
- Module 14: SMLC - Naive Bayes

Day 2 -Training Outline:

- Module 15: SMLC - Linear Discriminant Analysis
- Module 16: SMLC - Support Vector Machine
- Module 17: SMLC - Logistic Regression Classification
- Module 18: SMLR - Linear (Ridge & Lasso) Regression
- Module 19: SMLR - Stepwise Regression
- Module 20: SMLR - Decision Tree Regression
- Module 21: SMLR - Support Vector Machine Regression
- Module 22 SMLR - Gaussian Regression
- Module 23 SMLR - Neural Network Regression
- Module 24 - Ensemble Methods
- Module 25 - Convolutional Neural Network
- Module 26 - Asset Management 4.0

What's the training benefits ?

You do not need to know any algorithm language or have a deep mathematic knowledge. Everything will be clear explained step by step with examples. After this training you will be able to haave a deep understanding about the different Artificial Intelligence methods explained during the training to apply in your daily routine such as optimize your maintenance schedule, classify maintenance database in categories and predict the RUL, SoH and other parameters based on regression methods by using the MATLAB
